Product Showcase

Congress Associates is pleased to announce its product of the month NITEGLOW® by Wooster™ Products

Wooster Products is the leading manufacturer in safety treads and stair nosings. [NITEGLOW](#) photoluminescence treads and nosings offer a glow-in-the-dark feature, perfect for blackouts or other building failures. During the last year, many cities have enforced a mandatory requirement for NITEGLOW and similar products. Any building within a metropolitan area reaching higher than seven stories must incorporate photoluminescence treads for power failures and other malfunctions. These products meet the 2009 international fire codes for major cities in the United States. [Wooster Products](#) manufactures the NITEGLOW pigments into a superior strength epoxy. This method promotes exceptional durability of the pigment incorporated into our high quality Wooster stair treads proven to last.

Why Specify Wooster NITEGLOW Stair Treads?

NITEGLOW stair tread photoluminescent, pigmented epoxy is engineered to outperform other products such as adhesive based tapes. These adhesive based tapes are inadequate to withstand the elements and unable to endure heavy traffic over time. NITEGLOW stair treads and nosings deliver long-term performance, reliability and safety.

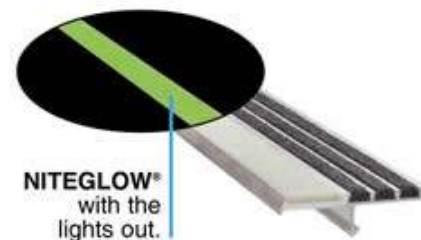

NITEGLOW® Anti-Slip Glow-in-the-dark Safety Products

At dark, NITEGLOW stair nosings and treads illuminate the way, providing the best solution for anti-skid, safety requirements.

Product Features:

- These products have been tested and approved for:
- Brightness rating: ISO 17398:2004
- Washability: ASTM D 4828-1994 (2003)
- Toxicity Bombardier: SMP 800-C R
- Radioactivity: ASTM D 3648-2004
- Flame Spread: ASTM D 635-2003

[Congress Associates](#) and Wooster Products can assist you in making the right product selection to meet your specifications. NITEGLOW is “the difference between night and day” over other offerings. Contact us to see how NITEGLOW treads can make your next project a success.

1 World Trade Center

The Freedom Tower Adds PL Anti-Slip Stair Nosings as Part of the Largest PL Project in the World

Following the terrorist attacks of the World Trade Center Twin Towers in New York City, new building codes were approved that require the installation of PL products to mark exits and to make it faster and easier to exit buildings during an emergency. PSA

(Photoluminescent Safety Assoc.) member Wooster Products, a manufacturer of anti-slip stair nosings and treads since 1921 is manufacturing the PL stair markings now being installed in New York at One World Trade Center, also known as the Freedom Tower, now under construction in lower Manhattan.

New York code requires photoluminescent exit path markings on the entire horizontal leading edge of each step. Wooster photoluminescent stair nosings are being installed in the Freedom Tower, World Trade Center Tower 4, and in the World Trade Center Memorial emergency exit stairwells. Stair nosings for 1 World Trade Center are being pre-cast into concrete steps, hauled to the job site and then installed with cranes. Stair nosings for Tower 4 and the WTC Memorial are being placed into the concrete steps on site. This entire project is the largest single use of photoluminescent stair nosings in the world.

The International Code Council adopted into the 2009 International Building Code Section 1024 and International Fire Code, 4604.23, mandating that all nonresidential buildings, new and existing, over 75 feet in height must install Photoluminescent Exit Path Markings in all enclosed emergency stairwells.

Congress Associates Representing Wooster™ Products

Congress Associates, LLC, is a Manufacturers' agency that represents a select few building envelope products. We represent companies such as FiberTite Roofing Systems, Siplast Waterproofing Systems, Republic Powdered Metals, Daylighter Solar Light Systems and Wooster Products. Wooster Products is a safety tread company with offices and manufacturing facilities located in Wooster, OH.

Congress Associates, as the local representatives of Wooster Products, can offer personalized service and assist our customers in the order processing of their safety treads. In 2009, Congress Associates joined forces with Wooster Products to represent the product line in the New England area.

Since then, John Massengill and David Whitton have offered product consulting and customer service to assist you with your unique project challenges. Together Congress Associates and Wooster Products take the guesswork out of protecting your building assets.
